DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Hilton et al. (US Pat. No. 5,798,748).

In regard to claims 1, Hilton et al. teach an optical mouse integrated circuit comprising: an unitary substrate; an optical sensor (310) generating data; an analog-to digital converter receiving and processing the data; a microprocessor (302) receiving the processed data; and memory (316) connected to the microprocessor; wherein the optical sensor (310), analog-to digital converter (304), microprocessor, and memory are formed on the unitary substrate (see fig. 19). Furthermore, the control circuit is in the form of a microcontroller, and the digital-to analog converter circuit (510) is in the form in an R-2R resistor ladder are combined on a single integrated circuit (IC) (see Fig. 19, col. 22, lines 1-48) which all function as claimed.

In regard to claims 2 and 3, Hilton et al. disclose a digital signal processor interposing the A/D converter and the microprocessor including a hardware controller (see Fig. 9).

Art Unit: 2674

In regard to claims 4-6, Hilton et al. disclose the microprocessor (121) including an input/output controller and a digital signal processor interposing the analog-to-digital converter and the microprocessor (see Fig. 19, col. 18, lines 53-65).

As to claim 8, Hilton et al. disclose a microcontroller (504) and memory (505) and the control logic (512) (see Fig. 19) which includes a non-volatile RAM (516) (is a program often referred to as basic input/output system "BIOS").

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rosenberg and Hilton et al. are made of record to show various types of optical mouse with integrated circuitry.
